- The highest class of acrylic PUR lacquer, the DE 4259x is one of the most highly specified lacquers available on the European market.
- Ideal for high stress environments such as restaurants, kitchens, bathrooms or any area demanding the highest levels of both chemical and mechanical resistance.
- Exceptional flow and leveling characteristics.
- Excellent surface feel.
- Fade resistant, non-yellowing & suitable for bleached wood.
- B1 and IMO certified flame retardant, for piece of mind on land or sea.

DB 45245-Colour Tone

Mix ratio: 10:1 with DR 4070

Pot life: 1 working day at 20°C!!

Sanding time: 2 - 3h at 20°C

- Hesse-Lignal's most popular pigmented acrylic PUR lacquer.
- Class leading performance across the whole interior sector, including kitchen and bathroom, or any area demanding exceptional chemical and mechanical resistance
- Exceptional flow and leveling characteristics, even on vertical surfaces
- Extremely high opacity. Hesse-Lignal use between 10 and 15% higher pigment loads than their competitors.
- Produces an elegant, extremely smooth surface in all gloss levels due to ultra-fine matting agents.
- Light fast, PVC resistant and good resistance to metallic rings
- Available in almost all colour tones and in a wide range of gloss levels.
- B1 and IMO certified flame retardant, for piece of mind on land or sea.

DP 4799-9343

Mix ratio: 10:1 with DR 4070

Pot life: 4 - 5h at 20°C

Sanding time: 2h at 20°C

- Top class high solids PUR primer based on acrylic resin
- An ideal general purpose primer that covers a wide range of uses across the interior sector
- Extremely stable with first-rate isolation on MDF edges.
- Excellent adhesion properties allow this product to be used on many plastics and foils.
- Good flow and exceptional leveling characteristics
- Unparalleled sanding performance leaves the competition in the dust! Fast, clean, smooth...easy!! Sanding as it should be!
